MANDATORY MODULES

Module 23306 Research Methods				
MA	Semester 1-2	6 h/week	12 ECTS	Contact Time / Self Study (in hrs): 72/178
Teaching Methods		Seminar		
Event Type		Obligatory <input checked="" type="checkbox"/> Elective <input type="checkbox"/>		
Period		2 Semester		
Rotation		yearly <input type="checkbox"/> per semester <input checked="" type="checkbox"/>		
Examinations				
Scope and Length of Examinations				
Module Responsibility with		Chair of Political Sociology		
Prerequisites		None		
Use of Module		Mandatory Module MA IRGP		
<p>Contents</p> <p>The aim of the module is to expand existing basic skills in empirical methods. To do this, on the one hand the scientific theoretical basics of empirical research are discussed, with a special focus on epistemological problems as they can be found in different research approaches and different schools of thought, such as the so-called "quantitative" and "qualitative" research. Throughout the whole sub-module, an integrative viewpoint is adopted, i.e. the point of view that successful research in social sciences requires knowledge and understanding that relate to both research traditions.</p> <p>Qualification Objectives</p> <p>The students get to know the prevailing approaches in the theory of science and in research design, can evaluate them regarding specific research questions, and apply them in their own research. The students understand the different methodological approaches of social research and can apply them to their own research questions.</p> <p>Literature</p> <ul style="list-style-type: none"> Agresti, Alan, and Barabara Finlay. 2009. <i>Statistical Methods for the Social Sciences</i>. 4th Edition. Prerequisites				
Use of Module		Mandatory Module MA IRGP		
<p>Contents</p> <p>How can we explain political dynamics between and beyond states? In this module, students get introduced to key concepts of International Relations theories. It deals with why “theory” is important in shaping our thinking about policy options. We discuss different theoretical perspectives on concepts such as anarchy, sovereignty, diplomacy, law and normativity. Students apply these concepts and theoretical insights to current issues in international politics. Are we facing a new nuclear arms race? How can we make sense of the lack of cooperation on climate change? Is diplomacy a peaceful means of world politics or does it facilitate armed conflict? Can international law constrain state behaviour? In discussing these questions students learn how to use theoretical tools for the analysis of world politics and how to criticise theoretical claims and political events.</p> <p>Qualification Objectives</p> <p>Students should be able to</p> <ul style="list-style-type: none"> discuss the role of theory in understanding international politics; apply theoretical assumptions to empirical problems and cases; critically analyse the limits of specific theoretical schools. <p>Literature</p> <ul style="list-style-type: none"> Dunne, Tim / Kurki, Milja / Smith, Steve (2013, eds.): International Relations Theories: Discipline and Diversity, Oxford: Oxford University Press

Content				
<p>Global Governance refers to the rise of cooperative relations in international politics – documented, for instance, by the increasing number of international organizations, norms and regulations. Such relations often include not only states but also non-state actors, such as NGOs or multinational corporations.</p> <p>This module covers current changes of the state and the effects thereof on global governance in different policy fields. The module analyzes institutions, actors and policy processes as well as their implications. To this aim, the module draws on a variety of empirical cases, including disarmament, resource management or health policy. Moreover, the module addresses questions of authority and legitimacy of such new governance forms as well as their contestation.</p>				
Qualification Objectives				
Students				
<ul style="list-style-type: none"> are able to understand and present central conceptual and theoretical approaches of global governance; have gained experience in applying the conceptual and theoretical approaches to empirical cases in different policy fields; are able to analyze and assess different forms of global governance as well as their legitimacy and contestation; are able to critically assess different types of global governance.

<p>Contens</p> <p>Violent conflicts are getting more and more complex. We observe a rise of civil wars as well as a rise of activities of transnational violent actors. Technical advances in the weapons industry and digitalization pose new threats. We seem to be moving back to old-school block confrontations of great. Simultaneously, international institutions organize more complex multilateral peacekeeping and peacebuilding activities, and wars get more regulated, based, for example, on the introduction of a responsibility to protect (R2P) or the establishment of the International Criminal Court (ICC).</p> <p>This module tries to make sense of these different observations. It will give an overview of central categories and controversies in the field of Peace and Conflict Studies. We will think about concepts like war, conflict, violence, and peace and analyze the theoretical assumptions linked to these terms. We will also discuss different forms of violent conflicts as well as major theoretical explanations for such conflicts. Last, but not least, we will deal with different international strategies of peacebuilding as well as the international regulation of violent conflicts.</p> <p>Qualification Objectives</p> <p>After participating in this class, students should be able</p> <ul style="list-style-type: none"> to distinguish and critically discuss basic concepts in the field of Peace and Conflict Studies; to analyze empirical phenomena of violent conflict and to link them to theoretical perspectives; to critically discuss different theoretical perspectives in Peace and Conflict Studies. <p>Literature</p> <ul style="list-style-type: none"> Barash, D. Content					
<p>The institutions of the European Union (EU) constitute a unique, supranational political system. Focusing on different pieces of literature, specifically on theories of regional integration and EU decision-making, this module will put an emphasis on the European Institutions – namely the European Parliament, the European Council, the Council of Europe and the European Commission, as well as the Court of Justice of the European Union and the European Central bank. Their functioning and their exchange relationship will be analysed systematically. This module will furthermore examine the interactions between said European Institutions and the national institutions of the EU member countries in various policy areas.</p>					
Qualification Objectives					
<p>Students will gain a broad overview of the political system of the European Union and can assess tasks and functions of central institutions of the EU. Furthermore, they will be familiar with crucial theories of regional integration, of the EU-decision-making-process and can apply said theories in independent analyses of empirical case studies.</p>

Content				
<p>This module addresses normative questions of democracy and justice beyond the state: how can a legitimate and just order be organized beyond national borders? Which moral points of reference should be applied? Which institutional designs are possible? The module covers cosmopolitan and communitarian approaches to democracy and justice and discusses concrete options of implementation; e.g. parliamentary assemblies and deliberative civil society fora in international organizations, the right to vote for migrants or global redistribution mechanisms such as a financial transaction tax or fair supply chains. The module combines normative questions of duties, rights and responsibility in the global sphere with suggestions regarding their political implementation.</p>				
Qualification Objectives				
Students				
<ul style="list-style-type: none"> are able to understand and present different theoretical approaches to democracy and justice; are able to critically assess different suggestions regarding their implementation; have gained experience in applying the conceptual and theoretical approaches to different empirical policy fields based on literature research, verbal as well as textual analysis.

Module Responsibility with		Chair of Public Law Tax & European Law & Regulatory Law		
Prerequisites				
Use of Module		Elective Module MA IRGP		
<p>Content</p> <p>What are the rules under which governments work together? Which regulatory systems exist besides the national or the European legal system? And what rights can individuals derive from these systems at the international level? These are only three questions intended to highlight the prominent role of international law. International law is the legal link between states, institutions and private individuals. The course "International Law" provides the basics of this extensive field of law. The following topics are of particular importance:</p> <ul style="list-style-type: none"> Legal sources of international law Subjects of international law (including states, I.O., individuals) Principles of diplomatic protection Sovereignty, State Immunity and Responsibility Human rights protection and international humanitarian law <p>Qualification Objectives</p> <p>The students</p> <ul style="list-style-type: none"> know legal sources and basic concepts of international law; they are able to apply them in practical cases. know the structure and organization of the UNO and are able to assess its options for action and those of its staff members. are familiar with the instruments of international human rights protection and can assess their significance for the international community and the international legal system. can discuss current issues of international law and integrate them into the general international legal discourse. can assess the extent to which international law is a tool in the areas of international relations, development policy, and security. <p>Literature</p> <ul style="list-style-type: none"> dtv Text „Völkerrechtliche Verträge, 15. <p>Content</p> <p>The module deals with the systematic research of comparative policies on an international level. Comparative political research will focus specifically on following scientific questions:</p> <ul style="list-style-type: none"> Why do policies vary between countries and within those countries over time? In which patterns do certain policies spread from one country to another? Which role does the success of specific policies play in the stability of political systems? <p>These questions will be answered by examining various policy fields, such as regulations of the labor market, taxation and transfer payments, education, healthcare, crime and environmental issues.</p> <p>Qualification Objectives</p> <p>The students will familiarize themselves with fundamental methods and techniques of comparative policy analysis and learn to apply them to specific political problems. They will get to know the political background conditions needed for the emergence, adoption and transfer of policies and learn to estimate the successful realization of specific policies.</p> <p>Literature</p> <ul style="list-style-type: none"> Braans, Marleen/ Iris Geva-May/Michael Howlett (Hrsg.)(2017): Routledge Handbook of Comparative Policy Analysis.Routledge Knill, Christoph/ Christian Adam/ Steffen Hurka (hrsg.) Prerequisites					
Use of Module		Elective Module MA IRGP			
Content					
<p>We will explore psychological processes of decisions in general and more specifically in the legal domain. After an introduction to important theories and models and empirical findings on human decisions and their weaknesses, we will start to discuss decisions by algorithms. Since nowadays, governments are increasingly interested in the use of algorithms in decision making, we will delve deeper into the literature on costs and benefits of using AI systems especially in the legal system.</p>					
Qualification Objectives					
<p>Students will understand the basics of human decision making and automatic decisions by algorithms. In addition, they learn to reflect on the fairness of algorithmic decisions and how to test the quality of an algorithm. They will also understand what Big Data are.</p>					
Literature					
<p>Literature will be announced at the beginning of the semester.</p>

<p>Content</p> <p>Building on the Module „Research Design and Methods“, this course focuses on topics in political behavior and public opinion, including electoral behavior. It is concerned with the ways in which citizens form opinions, how they process political information and how they make voting choices. Accordingly, the topics of courses in this module include political Culture and political socialization, patterns of opinion formation and ideological thinking, and patterns of political participation and patterns of voting. Courses in this module provide an overview of the respective topic and introduce to the current state of research. When appropriate, the topics are illustrated by current affairs, such as Bundestag elections, elections abroad, or major political movements.</p> <p>Qualification Objectives</p> <p>After completing the module, students are expected to be familiar with the basic concepts and theoretical approaches relevant to a specific research area on political attitudes and political behavior and to know the main findings of the relevant research literature and are able to assess their implications. They should be able to choose topics for their master thesis and to take the first steps toward independent research.</p> <p>Literature</p> <p> Dalton, Russel, and Hans-Dieter Klingemann. 2007. <i>The Oxford Handbook of Political Behaviour</i>. <p>Content</p> <p>Over the last years the topic of inequality has gained attention in the context of scientific and societal debates. These debates about the increasing gap between the rich and the poor in a society and about different political possibilities to participate and different capabilities in a general sense are taking place in the realm of sociology, philosophy, political science and economics.</p> <p>In the seminar the concept of inequality is discussed under the perspectives of the disciplines of sociology, economics and political philosophy. Also it is examined what conditions of inequality constitute violations of concepts of justice.</p> <p>Specific areas are dealt with, in which problems of inequality and injustice arise. Furthermore the seminar focuses on the causes and consequences of inequality and injustice and political instruments are discussed, which are appropriate to eliminate or mitigate the problems of inequality and injustice.</p> <p>Qualification Objectives</p> <p>Students learn to appreciate to what extent and under what circumstances inequality is a problem. They understand the social and economic relations and the analysis and the development of policies dealing with inequality and justice and their effects.</p> <p>Literature</p> <ul style="list-style-type: none"> Thomas Scanlon (2018): Why does inequality matter? <p>Content</p> <p>The module deals with how governance and controlling can support public organisations in the effective, efficient and sustainable fulfilment of their tasks. It will be worked out how to work with appropriate concepts, instruments and processes in a context- and level-appropriate manner when making decisions and preparing decisions, and how the guiding principle of "doing good even better" can be realised in a scientifically sound manner. The theories, concepts and instruments developed will be discussed for problem analysis and formulation of design options.</p> <p>Qualification Objectives</p> <p>The students</p> <ul style="list-style-type: none"> can discuss the most important theoretical and conceptual foundations of the governance and controlling of public organisations, are capable of applying the theories underlying governance and controlling in a situation-adequate manner for problem analysis and for the formulation of design recommendations, are able to assess the possibilities and adaptation requirements for the context-appropriate use of governance and controlling instruments in public organisations, are able to discuss basic research methods in the field of governance and controlling. <p>Literature</p> <ul style="list-style-type: none"> Boven, M./Goodin, R./Schillemans, T. <p>Content</p> <p>The “digital transformation”, the increasing importance of (digital) information technology and of digital modes of communication, is a major source of technical, economical, and social innovations. Yet it also poses considerable challenges to society, politics, and policy. This module examines these challenges from a social science perspective. It also provides an overview of the methods and methodologies that are necessary to deal with these new possibilities and challenges in empirical social and political research. One set of methods and methodologies comprises the computer-assisted collection of textual data from the Internet (“web scraping”) and the analysis of (usually large) text corpora thus generated, e.g. using topic modelling and algorithms of natural language processing (NLP). Another set of methods comprises the reconstruction and analysis of complex social networks, processes, and organisations using agent-based modelling or non-linear systems modelling. The analysis of social processes based on extensive spatio-temporal event data and behavioural data or the use and further development of computational methods in the construction, estimation, and application of complex statistical and econometrical models are also potential topics of this module.</p> <p>Qualification Objectives</p> <p>Students acquire and understanding how computational approaches to social science research questions and to social and political problems differ from traditional approaches and are provided with an overview of the relevant methods and techniques.</p> <p>Literature</p> <ul style="list-style-type: none"> Alvarez, R. Michael. 2016. <i>Computational Social Science: Discovery and Prediction</i>. Cambridge: Cambridge University Press. Use of Module		Elective Module MA IRGP		
Content				
<p>This module is concerned with the practical analysis of research data sets, which may come from academic surveys, such as the <i>German Longitudinal Election Study</i> (GLES), the <i>Eurobarometer</i>, the <i>European Social Survey</i> or the <i>International Social Survey Program</i> (ISSP), or from other data collections, such as the <i>Manifesto Project</i> or the <i>Chapel Hill Expert Survey</i> (CHES). Courses in this module will discuss the acquisition of such data sets from scientific data archives, such as <i>GESIS</i>, or from data repositories, such as <i>DataVerse</i> and <i>Zenodo</i>; the preparation of such data sets for data analysis (including the creation of subsets, merging data sets and recoding of data variables); the selection and application of data analysis techniques suitable for answering the research questions selected by participants; and the creation of publication-ready tables and graphics that present the results of the analysis. Data management and analysis as well as the presentation of results are usually done with statistical software (such as <i>R</i>). This module thus provides the opportunity to exercise and deepen the skills and techniques acquired the module "Research Design and Methods" in their application to "real world" research data.</p>				
Qualification Objectives				
<p>After completion of the module students are expected to be able to analyse scientific data sets in order to answer their self-chosen research questions. They are thus able to deal successfully with the empirical aspects of the work on their master thesis.</p>

<p>Content</p> <p>The Module „Elinor-Ostrom-Project“ addresses students with a pronounced interest in science and a research-oriented field of work. It offers the opportunity of a supervised and scientifically accompanied realization of a research project at one of our ZU chairs, a center of research, a research cluster or partnership. In connection to the research project, the students will formulate a report in the shape of a written homework or scientific paper. This written composition represents an independent scientific output, that enables the students to apply the scientific methods and findings to a concrete research topic. The mentoring will be provided by the ZU chairs.</p> <p>Difficulties and advances regarding the project will be discussed in a research colloquium. While the necessary contents and methods will be taught in a seminar.</p> <p>Qualification Objectives</p> <p>The students will learn to independently conduct a research project and will be familiarized with advanced knowledge in scientific work.</p>

Content				
<p>The module „Advanced Methods“ consists in the participation in two methods workshops, which can be chosen freely, as long as they have two different topics. In each semester between two and four of such workshops are offered, which may involve topics such as agent-based modelling, analysis of binary and categorical data, panel data analysis, causal inference, design and application of case studies, discourse analysis, questionnaire design, design of experiments, grounded theory, hermeneutics, content analysis, multilevel analysis, multivariate analysis, network analysis, qualitative comparative analysis (QCA), web scraping, or time series analysis.</p>				
Qualification Objectives				
<p>After completion of the module students have acquired practical experiences in the use of advanced and innovative methods and are able to critically reflect and assess the application of such methods in the research literature they encounter in their later academic studies and in their work on their master thesis.</p>

<p>Content</p> <p>The module provides the preparation for the master examination. The students become familiar with the standards of academic work on the master level and learn to present and defend their master thesis. The length of the thesis is determined in coordination with the advisor and comprises usually between 70.000 and 100.000 letters.</p> <p>Qualification Objectives</p> <p>The students develop their own research question and answer it by critically reflecting on theories and methods of political and administrative sciences, as well as international relations.</p>

<p>Content</p> <p>The fundamentals of entrepreneurship form a prominent research focus at ZU, especially in the field of social entrepreneurship. Corresponding (student) projects are sustainably supported. The workshop on multi-value entrepreneurship familiarizes students with the background, questions, risks and potentials of start-up. Closely oriented to the chronology of the start-up project, it provides an overview of the necessary steps for planning new business ideas and discusses the theories and concepts of entrepreneurship.</p> <p>Qualification Objectives</p> <p>Upon completion of the workshop, students will possess techniques and tools to independently identify and assess a marketable innovation potential and to plan, finance and successfully market their own business ideas.</p>

Contents				
<p>The module focuses on the question of how the new and different comes into the world and how one gains unfamiliar perspectives on the familiar. Students are encouraged to experiment and perform with the possibilities of aesthetic and artistic forms of knowledge and to become creatively active. They learn observation, improvisation and imagination techniques and become familiar with forms of world appropriation that derive from practical, creative action and unfold in the work with their own bodies and senses.</p> <p>Within the module, different focal points are offered and combined with each other. These range from performative forms of presentation and filmic work, photography and drawing, design to ritual self-techniques of yoga. Practical workshop blocks and a public final presentation structure the program. Students interested in a more intensive exploration of the above topics should take Module 121403 "Creative Performance," which is elective for CCM students and multidisciplinary for students in other programs.</p>				
Qualification Objectives				
<p>The module aims at sharpening perception and imparts knowledge of alternative forms of knowledge and creativity techniques in the context of university education. Students receive a practical introduction to creative competencies and a sense of the social situatedness of their actions.</p>
